

Student Purpose

Step 1 – Research

Explore what it would mean to build rigorous, meaningful, problem-solving projects into your school.

For inspiration, take a look at how PSI High and Iowa BIG and invite community partners to propose student projects. Could their practices be adapted for your community and your school?

Step 2 – Reflect

Share findings with your team and discuss these questions:

- What approaches would work best in your school?
- How might you support students in naming problems themselves, including national and global issues, and contributing to solutions?

Project Ideas
